To Whom it may concern,

I would like to make a comment about the use of Glyphosate on our food. I can not believe that California of all places would even consider any tolerance at all to this horrible immune system threatening synthetic chemical. There should be ZERO allowance of Glyphosate on any of our food. Glyphosate kills the good bacteria that make up and support the human immune system not to mention the damage to the plant microbiome of our entire planet. Our children deserve a safe chemical free future.

Sincerely,
Joanne
